

MUHAMMAD SULEMAN

SOFTWARE ENGINEER

Lahore | +923277421779 | sulemanaslam.engineer@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software Engineer with 1+ year of professional experience building and maintaining production-level full-stack web applications for client-facing projects. Strong hands-on experience with Python, Node.js, React.js, Next.js, RESTful APIs, authentication flows, third-party integrations, SQL/NoSQL databases, Git, and Docker. Experienced in owning features end-to-end, debugging across the stack, collaborating with senior engineers, and delivering production-ready solutions. Also building practical AI/ML projects and expanding into AI-assisted application development. Strong analytical problem-solving skills with a focus on clean, maintainable software.

EDUCATION

Bachelor's in Computer Science | COMSATS University Islamabad, Lahore Campus

- Strong foundation in object-oriented programming, data structures and algorithms, databases, software engineering, and programming fundamentals.
- Programming experience with C, Java, Python, and JavaScript.

TECHNICAL SKILLS

- **Backend:** Python, Node.js, Express.js, RESTful APIs, Authentication, Third-Party API Integrations
- **Frontend:** React.js, Next.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB, Supabase; SQL/NoSQL Database Concepts
- **Software Engineering:** OOP, Data Structures & Algorithms, SDLC, Software Architecture, Design Patterns, Debugging, Performance Optimization
- **Tools & DevOps:** Git, GitHub, Docker, Postman, Netlify
- **AI/ML:** Machine Learning fundamentals, recommendation systems, Python-based ML development, AI-assisted development workflows

PROFESSIONAL EXPERIENCE

Associate Software Engineer | Endless Invo. | Jul 2025 – Jul 2026

- Developed and shipped features for 3+ production client applications using React.js, Next.js, Node.js, Express.js, and MongoDB.
- Owned and delivered end-to-end business workflows across healthcare, booking, and e-commerce applications, from UI implementation through API integration and backend functionality.
- Developed and integrated RESTful APIs, authentication flows, payment services, Google Maps, and other third-party integrations.
- Built a luxury ride-booking platform with booking workflows, real-time trip tracking, Google Maps integration, Stripe payments, coupon functionality, and multiple service categories.
- Built and maintained admin dashboards for users, content, orders, bookings, drivers, and operational workflows.
- Debugged and resolved frontend/backend issues, participated in code reviews and technical discussions, and incorporated feedback from senior engineers.
- Worked directly on production client applications while balancing feature requirements, maintainability, reliability, and delivery timelines.

Software Engineer Intern | Endless Invo. | Mar 2025 – Jun 2025

- Developed reusable React.js components and integrated them with REST APIs for live client projects.
- Assisted with frontend and backend feature development while following established software engineering practices.
- Debugged frontend and backend issues under the guidance of senior developers.
- Used Git, SDLC practices, and collaborative development workflows in a professional software engineering environment.
- Participated in daily meetings, feature planning, and technical discussions.

SELECTED PROJECTS

Telemedline — Telemedicine Platform | telemedline.com

- Developed role-based patient, doctor, and admin modules covering appointment booking, secure payments, consultation history, prescriptions, search/filtering, and user management.
- Built doctor and admin portals with schedule management, patient history, notifications, appointment oversight, and reporting workflows.

Tabbna Academy — Online Learning Platform for Healthcare | academy.tabbna.sa

- Built course and lecture management, learner progress tracking, completion-based certification, and free/paid course workflows with Moyasar payment integration.
- Implemented role-based dashboards for admins and instructors to manage courses, webinars, conferences, and user access.

LIMOARC — Luxury Chauffeur & Limo Booking Platform | limoarc.com

- Built a full-stack booking platform with Google Maps integration, Stripe payments, coupon discounts, multiple booking categories, and real-time trip tracking.
- Implemented customer, driver, partner, and admin workflows for ride management, navigation, earnings, fleet management, notifications, and platform operations.

Movie Recommendation System — AI/ML Application | Python / FastAPI / Streamlit

- Built a movie recommendation application using Python, FastAPI, machine-learning techniques, and a Streamlit frontend.
- Implemented recommendation logic using vector similarity and API-based communication between backend and frontend.

CERTIFICATIONS

- [Introduction to Software Engineering](#) — SDLC, software architecture, design patterns, Python, full-stack development, tools, and deployment.
- [IBM Front-End Developer Professional Certificate](#) — Modern frontend development and production-ready frontend workflows.
- Full Stack Web Development — APIs, authentication, and scalable backend architecture.
- [Machine Learning with Python](#) — Python, Machine Learning Algorithms, Supervised Learning, Unsupervised Learning.
- [Machine Learning Specialization](#) — Machine learning fundamentals and practical model development.
